Personalización

- **Bordado** : Esta técnica se utiliza generalmente para la personalización con el objetivo de obtener un acabado de alta calidad. Esta técnica es la más resistente al lavado y al uso. El bordado puede aplicarse directamente al producto o mediante parches bordados. Puede hacerse con efectos de grosor (con espuma) o mediante parches que luego se pegarán al producto final, permitiendo variaciones en los materiales.
- **Flexionar** : Es la técnica de marcado recomendada para las series pequeñas y medianas. Hay varios aspectos: liso, aterciopelado, fluorescente, con purpurina, dorado y plateado. Se trata de vinilos para planchar que se cortan y pegan mediante prensado en caliente. Se adaptan muy bien a una amplia gama de sustratos y materiales.
- **Digital** : El método de impresión que no conoce límites: precisión, efectos de color, número de colores... Esta técnica puede utilizarse para marcar todo tipo de cantidades de productos y es especialmente adecuada para los materiales a base de algodón.
- **Serigrafía** : La técnica más utilizada. Consiste, por el método del estencil, en depositar la tinta directamente sobre el producto. Hay tantas pantallas y pasajes como colores en el motivo a reproducir y se pueden conseguir todos los colores. Esta técnica permite producir cantidades muy grandes. Permite el uso de tintas con diversos efectos para obtener rendimientos muy diferentes y se adapta a casi todos los soportes textiles. El marcado de sustratos de color requiere una capa inferior opacificante llamada « blanco de fondo ».
- **Transfert** : La técnica adecuada para todos los materiales. Se recomienda para el equipaje, las prendas pesadas y las superficies de difícil acceso. Consiste en transferir el marcado de un soporte de papel a la prenda mediante pegado en caliente. El marcado por encolado aporta rigidez a los soportes ligeros a nivel de la zona de marcado, sin embargo, el producto conserva todas sus cualidades de confort.

Pourquoi ? / Why?

Dans le cadre du programme wear&care et dans une volonté de transparence, SOLO Group affiche les résultats de l'évaluation Higg Index de ses produits pour que chacun puisse en connaître les impacts environnementaux.

As part of the wear&care programme and in a desire for transparency, SOLO Group displays the results of the Higg Index evaluation of its products so that everyone can find out about their environmental impact.

Qui ? / Who is it?

La *Sustainable Apparel Coalition* (SAC) est une organisation à but non lucratif créée en 2009 rassemblant plus de 250 acteurs de l'industrie textile. L'objectif de la SAC est de réduire l'impact environnemental de chaque maillon de l'industrie textile et de promouvoir la justice sociale.

The *Sustainable Apparel Coalition* (SAC) is a non-profit organisation created in 2009 that brings together more than 250 stakeholders in the textile industry. SAC's goal is to reduce the environmental impact of every part of the textile industry and to promote social justice.

Méthode ? / Methodology?

Pour mesurer l'impact environnemental, la SAC a créé un ensemble d'outils permettant de mesurer et calculer les impacts environnementaux et sociétaux de manière standardisée. Ces outils sont rassemblés au sein d'une même plateforme : le *Higg Index*.

To measure environmental impact, SAC has created a set of tools to measure and calculate environmental and societal impacts in a standardised way. These tools are gathered in a single platform: the *Higg Index*.

Plus d'information sur la SAC / More information about SAC: www.apparelcoalition.org

Comment ? / How?

Les résultats présentés ici sont issus d'une analyse du cycle de vie du produit. Nous avons utilisé le *Higg Material Sustainability Index* (version 3.5) pour mesurer les impacts de la matière qui compose le produit et le *Product Module* (version 1.0) pour mesurer l'impact de la fabrication et de l'entretien du vêtement.

The results presented here are based on a life cycle analysis of the product. We used the *Higg Material Sustainability Index* (version 3.5) to measure the impacts of the material that makes up the product and the *Product Module* (version 1.0) to measure the impact of the manufacture and care of the garment.

Ce que nous mesurons : / What we measure:

Toutes les étapes de la vie du produit sont évaluées : culture ou recyclage de la matière première, mise en forme de la matière (filage, tissage...), teinture, confection, packaging, transport, entretien du produit (lavage, séchage...) et traitement de la fin de vie du produit. En revanche, nous ne pouvons pas mesurer l'impact environnemental du marquage du produit puisque nous vendons des produits vierges.

All stages of the product's life are evaluated: cultivation or recycling of the raw material, shaping of the material (spinning, weaving, etc.), dyeing, packaging, transport, maintenance of the product (washing, drying, etc.) and treatment of the end of the product's life. However, we cannot measure the environmental impact of product decoration as we sell blank products.

Comment lire les données ? How to read the data?

Pour chaque mesure, nous vous donnons deux chiffres.

1/ Le premier correspond à la mesure de l'impact environnemental de la production du produit : culture, filature, tissage, tricotage, teinture, assemblage, packaging, stockage, transport jusqu'au client.
2/ Le second correspond à la vie et la fin de vie du produit (Lavages à 40°C et séchages en machine, sans repassage) pour un nombre défini de cycles de lavages et séchages et pour un produit en taille M (08A pour l'enfant).

For each measure, we give you two figures.

1/ The first one corresponds to the measurement of the environmental impact of the production of the product: cultivation, spinning, weaving, knitting, dyeing, assembly, packaging, storage, transport to the customer.
2/ The second corresponds to the life and end of life of the product (washing at 40°C and drying in a machine, without ironing) for a defined number of washing and drying cycles and for a product in size M (08Y for kids).
